

# MSC

## Hierarchical Promotion Management System

### Business Process Diagrams

v1.0 • 10 April 2026 • Author: Jubril

### Process 1 — MSC Field Lead: Onboarding & Network Setup

---

Actors: MSC Admin, MSC Field Lead  
Trigger: Admin decides to onboard a new MSC Field Lead (Level 1 promoter).  
Outcome: MSC Field Lead account is active, barcode issued, MSC Field Lead can recruit MSC Field Agents and onboard pharmacies.  
Key Rules: Only Admin can create a MSC Field Lead. Barcodes are auto-generated. Cross-region approval required before operating outside primary territory.

■ Start / End / Final confirmed action   ■ Process step   ■ Decision / Conditional gate   ■ Error / Blocked / Rejected path

## Process 2 — Pharmacy Registration via Barcode Scan

---

Actors: Any Promoter (MSC Field Lead / MSC Field Agent / MSC Frontline Rep), Pharmacy Staff, System

Trigger: Promoter visits a pharmacy and presents their QR barcode for scanning.

Outcome: Pharmacy registered and linked to scanning promoter. Ownership timestamp immutably set.

Key Rules: Duplicate check: (1) business\_registration\_number, (2) pharmacy\_name + street\_address + LGA. Barcode scan timestamp recorded before any validation.

■ Start / End / Final confirmed action ■ Process step ■ Decision / Conditional gate ■ Error / Blocked / Rejected path

## Process 3 — Pharmacy Verification & Onboarding Bonus Trigger

Actors: MSC Admin, System

Trigger: A new pharmacy registration is in PENDING VERIFICATION status.

Outcome: Pharmacy verified or rejected. If verified, the system monitors for the first settled order, then triggers ₦2,000 bonus.

Key Rules: Both conditions required before bonus fires: verification\_status = VERIFIED AND first\_order\_settled\_at populated. Bonus can only ever be paid once per pharmacy.

■ Start / End / Final confirmed action ■ Process step ■ Decision / Conditional gate ■ Error / Blocked / Rejected path

## Process 4 — Monthly Commission Batch Calculation

---

Actors: System (automated cron), MSC Admin

Trigger: End of calendar month (automated) or manual trigger by Admin.

Outcome: Commission records generated for every active promoter, reviewed and approved by Admin, then queued for payout.

Key Rules: Only SETTLED orders included. Suspended promoter commissions are skipped. Approved batches are locked — only dispute notes can be appended.

■ Start / End / Final confirmed action ■ Process step ■ Decision / Conditional gate ■ Error / Blocked / Rejected path

## Process 5 — Promoter Suspension & Reinstatement

---

Actors: MSC Admin, System, Promoter

Trigger: Admin identifies misrepresentation, fraud, or policy violation.

Outcome: Promoter suspended (commissions frozen, barcode inactive) or reinstated after review.

Key Rules: Suspension is immediate. Pharmacies under a suspended promoter remain active but are flagged. Reinstatement requires Admin action with a logged reason.

■ Start / End / Final confirmed action ■ Process step ■ Decision / Conditional gate ■ Error / Blocked / Rejected path

## Process 6 — MSC Field Agent Recruiting an MSC Frontline Rep

---

Actors: MSC Field Agent, MSC Frontline Rep (recruit), System

Trigger: An MSC Field Agent wants to expand their network by recruiting a new MSC Frontline Rep (Level 3).

Outcome: MSC Frontline Rep account created, sub-barcode issued, MSC Frontline Rep can begin onboarding pharmacies.

Key Rules: Only MSC Field Agents can recruit MSC Frontline Reps. MSC Frontline Reps cannot recruit further. Enforced at API level and hidden in UI.

## Process 7 — Pharmacy Order Lifecycle & Settlement

---

Actors: Pharmacy, Payment Gateway, System

Trigger: A verified pharmacy places a product order on the MSC app.

Outcome: Order reaches SETTLED status, commission\_eligible = true, billing\_month assigned, commission engine can include in next batch.

Key Rules: Only SETTLED orders contribute to commission. settlement\_ref must be unique — prevents duplicate settlements. Pharmacy must be VERIFIED before placing any order.

■ Start / End / Final confirmed action ■ Process step ■ Decision / Conditional gate ■ Error / Blocked / Rejected path

## Process 8 — Admin Verification Call Flow

Actors: MSC Admin, System  
Trigger: Admin initiates a verification call for a pharmacy — initial check, spot-check, or follow-up.  
Outcome: Call logged with outcome. CONFIRMED allows verification. SUSPICIOUS flags for follow-up. The system tracks overdue follow-ups daily.  
Key Rules: No pharmacy can transition to VERIFIED without at least one CONFIRMED call log. A SUSPICIOUS outcome does not immediately reject — it flags and requires follow-up.

■ Start / End / Final confirmed action   ■ Process step   ■ Decision / Conditional gate   ■ Error / Blocked / Rejected path
